PROGRAMME SYNOPSIS

A Hazard and Operability (HAZOP) study is a formal, systematic and detailed examination of new or existing facilities. It focusses on the process, rather than risks from ‘outside the pipe’, which are better analysed using other studies such as HIREC/ HAZID/ HER. A HAZOP assesses the hazard potential, causes and consequences on a facility when there are deviations to the operating conditions, or the manner of operations. Existing safeguards need are reviewed to determine whether they can eliminate the cause or minimise the consequence.

This full day course is designed to educate participants in the HAZOP process from the perspective of a HAZOP team member.
